Type C-c C-c

```
1 print 4 + 5
2 print 'test'
3 for i in range(4):
4     print i
```

```
9
test
0
1
2
3
```

```
1 import matplotlib.pyplot as plt
2 import numpy as np
3
4 x = np.linspace(-3, 3)
```

```

5  y = np.exp(-x**2)
6
7  plt.plot(x,y, 'gs')
8  plt.xlabel('x-axis')
9  plt.ylabel('y-axis')
10 # Note it was a bad idea to use lecture3.1.png as a file name. It
11 # confused latex because it did not know an extension of .1.png
12 plt.savefig('lecture3-1.png')

```

Figure 1: my beautiful first figure

2 Notes on exporting.

I have MikTeX 2.9 installed. To export the syntax highlighted code, you must enable the execution of external commands.

In my git bash shell I ran:

```

1  initexmf --edit-config-file=miktex/config/pdflatex.ini

```

which opened up notepad. I put this line in the file:

```
EnableWrite18=t
```

Saved the file and closed it. Now, I can export this file by typing `C-c C-e` and I get a pdf file.
